Update: On request i added a base where the indicator is at the top.

A simple little 4-digit counter, remixed by Leviathan99's 3-Digit Counter for role players (<https://www.thingiverse.com/thing:3717872>) as i was looking for a way to save my z-calibration values for my printsheets.

I redesigned the endcaps for a more stable stand, extended the Corestick to allow 4 counterrings and attached it to the left endcap for easier printing, added a small washer ring between the counterrings and redesigned the arms inside for easier printing and more friction. Finally i changed the font for the numbers on the counterrings.

At the beginning, the counterrings might be hard to move. Just do 10-20 rotations on each and it will move easier.

Print Settings

Printer Brand:

Prusa

Printer:

I3 MK3S

Rafts:

Doesn't Matter

Supports:

No

Resolution:

0.2

Infill:

check notes

Filament: Prusament PETG Jet Black/Prusa Orange

Notes:

Use 100% infill for the counterrings, all other parts 25%. Resolution of 0.2 for the counterwheels gives good results but you might want to print them with a resolution of 0.1 for a better resolution of the numbers.
